The 2-Minute Rule

A short pause at the point of work:

- Before you start
- After a break
- Handover
- Interruption
- Change

Two minutes is a guide. A repeat task takes seconds.

STOP Hands off.

LOOK Around the job and compare with the plan.

ASK Ask yourself the four questions.

1. **What's different?**
   Anything new, changed, or not as planned?
2. **What could hurt us?**
   Moving parts, power, heat, sparks, solvents, heavy loads, potent product?
3. **Checked or assumed?**
   Checked means you saw or tested it yourself. Assumed means you're guessing.
4. **What if it goes wrong?**
   Where does it go? Who is in the way?

DECIDE Make one of three calls. See the back.

DECIDE Make one of three calls.

GO

You found nothing wrong. Start the job.

FIX IT

Only if you're trained and authorized, **and** it's a step in your procedure.

STOP & GET HELP

Hands off. Leave it as it is. Call your lead. No permit yet? Someone else's unfinished work? Not authorized? The fix doesn't work? **When in doubt, get help.**

This rule adds to your procedures, permits, lockout and guards. It never replaces them.
