SORTING CARD 1

Start of shift. You run the same pouching machine as yesterday. The handover note says nothing changed. You check: guards closed, interlock light green, no locks or tags, materials match the batch record.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 2

You're a contractor painting in the warehouse. Your permit covers this area and says the main aisle is closed. You check: permit in date, barrier up, aisle closed.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 3

At the coater, used solvent wipes are on the bench, and the lid of the metal waste can is propped open. Your procedure says: wipes in the can, lid shut. You're trained and authorized to do it.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 4

Your procedure for taking a sample from the adhesive mixer says face shield and solvent gloves. You have your solvent gloves on, but only safety glasses. The face shield is on the rack beside you.

Your call?

✓ GO | FIX IT | STOP & GET HELP

MODEL ANSWER 2

✓ GO

The permit, your checks and what you see all match. Checked, not assumed.

Names only. These answers hold on any site.

MODEL ANSWER 1

✓ GO

You looked and asked, and you checked instead of assuming. Nothing is different. Most pauses end like this, in seconds.

Names only. These answers hold on any site.

MODEL ANSWER 4

FIX IT

Your protective gear is part of your procedure. Put the face shield on over your glasses, then Go.

Check locally. Your area lead and EHS confirm this answer against your fix list before use.

MODEL ANSWER 3

FIX IT

It’s a step in your own procedure, and you’re trained and authorized. Wipes in the can, lid shut, then Go. If the can is full or the lid won’t close: Stop & get help.

Check locally. Your area lead and EHS confirm this answer against your fix list before use.

SORTING CARD 5

A jam on the cartoner where your jam tool can't reach. You've locked out power and air under your own lock. The gauge still shows air pressure. Your procedure says bleed it through the lockable dump valve, and you're trained and authorized to do it.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 6

The same kind of jam, on the labeler. You've locked out power and air. The gauge still shows pressure. There's no lockable dump valve, and your procedure doesn't say how to bleed it.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 7

Night shift. On the laminator, someone has started a roll change. The new roll is on its shaft, but it isn't locked in place. Nobody's around, and your lead doesn't answer the radio.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 8

Changeover on the pouching machine. A guard won't close fully, so the machine won't start. A co-worker says: "Tape the switch for now. Maintenance knows."

Your call?

✓ GO | FIX IT | STOP & GET HELP

MODEL ANSWER 6

STOP & GET HELP

It isn't a step in your procedure. Don't loosen fittings or make up a way to bleed it. Your lead gets maintenance.

Check locally. Your area lead and EHS confirm this answer against your fix list before use.

MODEL ANSWER 5

FIX IT

Bleeding to zero under your own lock is in your procedure. Stand clear while it bleeds. Bleed to zero, try START, nothing moves, then Go.

Check locally. Your area lead and EHS confirm this answer against your fix list before use.

MODEL ANSWER 8

STOP & GET HELP

Guard and interlock work needs someone authorized. Taping or bypassing an interlock is never a fix.

Names only. These answers hold on any site.

MODEL ANSWER 7

STOP & GET HELP

It's someone else's unfinished work. Don't finish it for them, and don't run the laminator. Call the "No answer?" contact on your job aid. Don't start until someone comes.

Names only. These answers hold on any site.

SORTING CARD 9

After cleaning, the hatch on the adhesive mixer is open. A scraper has dropped inside, an arm's length away.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 10

Before you start the coater, your procedure says test the emergency stop. You run it slowly and press the emergency stop. The rollers keep turning.

Your call?

✓ GO | FIX IT | STOP & GET HELP

MODEL ANSWER 10

STOP & GET HELP

A safety stop that fails its test isn't yours to fix. Stop the coater the normal way, leave it as it is, and call your lead. It doesn't run until it's repaired and tested.

Names only. These answers hold on any site.

MODEL ANSWER 9

STOP & GET HELP

Reaching or leaning into a vessel needs a gas test and a permit, whether it's your arm or your whole body. No permit, no Go. Your lead also brings in QA, because the adhesive mixer may need re-cleaning.

Names only. These answers hold on any site.
