SORTING CARD 1

Start of shift. You run the same blister packer as yesterday. The handover note says nothing changed. You check: guards closed, interlock light green, no locks or tags, materials match the batch record.

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 2

You're a contractor painting in the warehouse. Your permit covers this area and says the forklift route is closed. You check: permit in date, barrier up, route closed.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 3

You're about to fill a drum from a solvent line. Your procedure says: clip the grounding clamp to the drum, and check the indicator. You're trained and authorized to fill drums. The clamp is hanging on its hook. The cable looks fine.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 4

Your procedure for sampling from the reactor says face shield and chemical gloves. You have your chemical gloves on, but only safety glasses. The face shield is on the rack beside you.

Your call?

✓ GO | FIX IT | STOP & GET HELP

MODEL ANSWER 2

✓ GO

The permit, your checks and what you see all match. Checked, not assumed.

Names only. These answers hold on any site.

MODEL ANSWER 1

✓ GO

You looked and asked, and you checked instead of assuming. Nothing is different. Most pauses end like this, in seconds.

Names only. These answers hold on any site.

MODEL ANSWER 4

FIX IT

The right PPE is part of your procedure. Put the face shield on over your glasses, then Go.

Check locally. Your area lead and EHS confirm this answer against your fix list before use.

MODEL ANSWER 3

FIX IT

Clipping on the clamp is a step in your own procedure, and you're trained and authorized. Check the indicator, then Go. If the cable is damaged or the indicator stays red: Stop & get help.

Check locally. Your area lead and EHS confirm this answer against your fix list before use.

SORTING CARD 5

A jam on the cartoner where your jam tool can't reach. You've locked out power and air under your own lock. The gauge still shows air pressure. Your procedure says bleed it through the lockable dump valve, and you're trained and authorized to do it.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 6

The same kind of jam, on the labeler. You've locked out power and air. The gauge still shows pressure. There's no lockable dump valve, and your procedure doesn't say how to bleed it.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 7

Night shift. You arrive to clean the granulator. Someone else's lock and tag is on it. Nobody's around, and your lead doesn't answer the radio.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 8

Changeover on the capsule filler. A guard won't close fully, so the machine won't start. A colleague says: "Just tape the switch. Maintenance knows."

Your call?

✓ GO | FIX IT | STOP & GET HELP

MODEL ANSWER 6

STOP & GET HELP

It isn't a step in your procedure. Don't loosen fittings or make up a way to bleed it. Your lead gets maintenance.

Check locally. Your area lead and EHS confirm this answer against your fix list before use.

MODEL ANSWER 5

FIX IT

Bleeding to zero under your own lock is in your procedure. Stand clear while it bleeds. Bleed to zero, try START, nothing moves, then Go.

Check locally. Your area lead and EHS confirm this answer against your fix list before use.

MODEL ANSWER 8

STOP & GET HELP

Guard and interlock work needs someone authorized. Taping or bypassing an interlock is never a fix.

Names only. These answers hold on any site.

MODEL ANSWER 7

STOP & GET HELP

Someone else's lock means someone else's unfinished work. Never remove or work around another person's lock. Call the "No answer?" contact on your job aid. Don't start until someone comes.

Names only. These answers hold on any site.

SORTING CARD 9

After cleaning, the manway on the reactor is open. A gasket has dropped inside, an arm's length away.

Your call?

✓ GO | FIX IT | STOP & GET HELP

SORTING CARD 10

A glove finger on the isolator looks thin. Spare gloves are in the cabinet, and you've watched a glove change many times.

Your call?

✓ GO | FIX IT | STOP & GET HELP

MODEL ANSWER 10

STOP & GET HELP

A damaged glove may be a break in the barrier. Your lead and QA must know. An authorized person changes the glove and leak-tests it. Glove changes are always Stop & get help, however often you've watched one.

Names only. These answers hold on any site.

MODEL ANSWER 9

STOP & GET HELP

Reaching or leaning into a vessel needs a gas test and a permit, whether it's your arm or your whole body. No permit, no Go. Your lead also brings in QA, because the reactor may need re-cleaning.

Names only. These answers hold on any site.
